ALCOHOL

This program is designed to estimate the effect of alcoholic beverages on your behavior. Alcohol can have significant effects on your psychological and physical state. Many factors, such as your weight, the time spent drinking and the type of beverage consumed, can greatly affect your behavior. While a number of other personal factors can also influence your reaction to alcohol, this test can give you a reasonable estimate of your alcohol limit.

To use this program, simply answer the questions about your weight and the amount of alcohol you have consumed. Press the RETURN key after typing in each answer. Use whole numbers only.

After answering all the questions, the program will provide you with a bar graph indicating the percentage alcohol in your blood. A value of .30 indicates that your blood alcohol content is .3%. A further analysis of your physchological and physical state can be obtained by pressing any key.

SEX ROLE

Are you androgynous? Find out with our Sex Role program.

A few years ago, men were expected to fit the male stereotype and women were expected to fit the female stereotype. Any deviation from these expected characteristics would be frowned upon by society.

Today, we recognize that men and women don't have to fit these stereotypes, but may have the desirable characteristics of both. These well-balanced people are said to be androgynous. Our sex role test is designed to determine whether your personality has masculine, feminine or androgynous characteristics.

You will be given twenty multiple choice questions to answer. These are the possible responses:
Usually not
Sometimes
Quite often
Almost always
Don't know

After deciding which answer is most appropriate, press the key of the first letter of the answer. For example, if you answer, 'Quite often', press the 'Q' key. Do not use the RETURN key after pressing the answer key.

When you're done with all of the questions, the program will judge your personality characteristics. Whatever the result, remember that this test was designed for your entertainment. So have fun.

CREATIVE COMPUTING MAGAZINE

Creative Computing is the Number 1 magazine of software and applications bringing you over 144 pages of new material every month. Subscriptions in the USA cost $15 for 1 year, $28 for 2 years or $40 for 3 years. Add $9 per year to these rates for foreign surface postage or $24 per year for airmail. Send payment with order to:

Apple II Loading Instructions

The five programs on this tape will load in a standard 16K Apple II with integer BASIC. Consult the Apple manual for information on what kind of cassette recorder to use, how to connect it to the computer, etc.

All five programs on this tape load from interger BASIC with the LOAD command. (> LOAD)

If you have trouble loading a program, be sure to try both copies (there's one on each side of the cassette). Try adjusting the volume control on your tape player. This is sometimes a critical factor in getting a good load. If you still can't load the programs, then send the tape back to Creative Computing for replacement.

LIFE EXPECTANCY

This program is designed to estimate your life expectancy based upon lifestyle, hereditary factors and environment. The quiz consists of twenty questions. Answer each truthfully by pressing the key of the letter that corresponds to the most appropriate response. You need not press the RETURN key. If you press a key that does not correspond to one of the given answers, the computer will request you to try the same question again.

While this quiz is a lot of fun, it does provide a realistic estimate of your life expectancy. You can also see how changing your lifestyle or environment might increase or decrease your expected life span, sometimes by as much as ten years.

PSYCHOTHERAPY

We all are occasionally concerned with our mental state. Yet how do we know whether our fears and concerns are serious enough to warrant treatment by a professional psychotherapist?

Well now your computer can help you find out with our Psychotherapy Test. It is not designed to take the place of a professional counselor, but will help you to determine whether counseling would be helpful.

The test consists of twenty questions. Each question has four possible responses (1,2,3 or 4). Press the key corresponding to the most appropriate answer. Then press the RETURN key. Answer each question truthfully, as incorrect answers will not provide you with an honest assessment of your mental state.

COMPUTER LITERACY

In the past thirty years, computers have made a major impact on society. So much so, that they themselves are now an important part of everyday life. How much do you really know about computers and their history?

With the Computer Literacy Test, you can find out just how much you do know. Each round of the test consists of five randomly selected, multiple choice questions. This is a timed test, so you must answer each question as quickly as possible. When you think you know the correct answer, press the corresponding key (1,2,3 or 4). Do not use the RETURN key.

For a correct answer, you will receive the number of points remaining on the clock. If you answer incorrectly you will be given a 25 point penalty, but try another answer. After five questions, the program will rate your computer aptitude. A score of 500 is perfect.
